Founding Engineer building AI-native products end-to-end — frontend to backend to infra — across a no-code growth platform serving 100K+ DAUs and custom banking deployments for InPrime, HDFC, and Axis.

EXPERIENCE

- **Niti AI** (*founded by ex-Uber, Microsoft, Amazon engineers*) Bengaluru, India
Aug 2023 - Present
 - **No-code Growth Platform (Loop)**: Built the core product as part of the founding team — a no-code platform for creating in-app growth experiences. Shipped a drag-and-drop UI editor with inline editing, real-time preview, and **GenUI** to generate complete user journeys from a single prompt — enabling clients to ship in-app campaigns without writing a line of code.
 - **Platform-Agnostic SDK Suite**: Shipped production-grade SDKs for **React, React Native, Flutter, and Android** enabling client integrations in under **5 minutes**, via a centralized middleware architecture that cut SDK maintenance overhead by **95%** across 4 platforms.
 - **AI-Powered Engagement Engine**: Built the RAG-based recommendation system that **drove 60K+ monthly clicks** with **up to 1% CTR lift** across client apps. Owned the full stack from embedding pipeline to UI rendering — no handoffs.
 - **Shopify Marketing Intelligence Agents**: Built the multi-agent LLM system (**LangGraph + BigQuery**) behind Niti AI's growth intelligence product — a Meta Ads creative grading pipeline (A–F letter grades), an adset allocation/recommendation engine, and cross-channel ROAS and retention-risk analysis for D2C Shopify merchants.
 - **Infrastructure, DevOps & AIOps**: Owned all infrastructure and DevOps across **GCP and AWS** — instance and cluster management, autoscaling, and Lambda-based serverless workflows — supporting a multi-tenant backend serving **100K+ DAUs at 99.9% uptime** using Next.js, TypeScript, and Golang. Led production incident triage and reliability fixes.
 - **Client Integrations** — **Ajio, Wakefit, Third Wave Coffee, InPrime, HDFC, Axis**: Worked directly with clients across D2C (Ajio, Wakefit, Third Wave Coffee — integrating Shopify, custom in-house CMS, Databricks/Snowflake, and Google/Meta Ads data) and enterprise banking (on-prem deployments of Loop/LoopX for InPrime's loan underwriting workflows and voice AI pre-screening agent, HDFC Group Ops' insurance dashboards and AI-driven user journeys, and a full escrow product for Axis) — scoping solutions and shipping features end-to-end, including infra setup and team leadership on the HDFC/Axis engagements.

PROJECTS

- **Joel** — **Self-Hostable Company Brain** (Python/FastAPI, Next.js, HydraDB, Composio): Built a multi-workspace company memory system that connects Slack, Gmail, GitHub, Linear, and more via Composio, distills threads into structured artifacts, resolves entities into a HydraDB ontology with a decision-reversal ledger, and answers with multi-lane retrieval plus abstention. Surfaces: web chat, MCP ask tool, and Slack bot — visibility always derived server-side from who is asking and which room they are in.
- **Aura** — **Voice-Driven Android Screen Agent** (Kotlin, Android Accessibility, Mobile-use): On-device Android assistant that reads the accessibility tree, runs an LLM agent loop to pick the next UI step, and guides the user with an overlay cursor and spotlight — never taps or types for them. Multi-provider LLM routing (local Ollama / OpenRouter / Anthropic / OpenAI) with voice summon bubble and step-gated progression.
- **Kami** — **AI Go-to-Market Agency for Startups** (Next.js, TypeScript, Hermes, Supabase): Co-built an open-source, self-hosted GTM agent (**60+ GitHub stars**) that researches customers and drafts outreach from a company dossier — human approval before any send/post. Orchestrates local Hermes agents with Supabase-backed campaign state; live at trykami.app.
- **Agentic Template** — **AI Workflow Orchestration Starter** (FastAPI, LangGraph, PostgreSQL): Production-oriented starter framework for agentic AI systems — workflow state management, persistence, checkpointing, and REST APIs for long-running multi-step workflows, with extensible graph-based execution patterns for custom agents and RAG pipelines.
- **Claude Pulse** — **Chrome Extension for Claude Usage Observability** (JavaScript, Chrome Extensions API): Shipped an open-source Chrome extension with **1,000+ users** that surfaces real-time Claude usage metrics — context window tokens, cache countdown, and 5-hour / 7-day rate limits — plus one-click chat export to text/Markdown. Fully local and private. Source: github.com/dupenodi/claude-pulse.
- **Buffer** — **macOS Clipboard Manager** (Swift, SwiftUI, AppKit): Major contributor to an open-source macOS clipboard manager with **409 GitHub stars** and **3,190+ downloads**. On-device OCR via Apple Vision, disk-backed storage, pins, bookmarks, multi-select paste, and configurable global hotkeys. **~2 MB install, fully local and private**. Maintained by [samirpatil2000](https://github.com/samirpatil2000).
- **pgtruth.com** — **Crowdsourced PG Review Map** (Next.js 14, Supabase, Mapbox GL JS): Anonymous map-based review platform for paying guest accommodations in Bangalore — geolocation search, user submissions, and interactive map rendering.

SKILLS SUMMARY

- **Frontend**: Next.js, React.js, TypeScript, React Native, Flutter, Tailwind CSS
- **Backend**: Python, FastAPI, Node.js, Golang
- **AI / ML**: LangChain, LangGraph, RAG Systems, OpenAI & Anthropic APIs, pgvector, Composio
- **Data & Infra**: PostgreSQL, Supabase, BigQuery, HydraDB
- **Cloud & DevOps**: AWS (EC2, S3, Lambda), GCP, Docker

EDUCATION

- **Sri Siva Subramaniya College of Engineering** Chennai, India
Bachelor of Engineering - Computer Science Nov 2020 - June 2024
