EXPERIENCE

- Niti AI

Founding Fullstack Engineer

Bengaluru, India
Aug 2023 - Present
- No-code Growth Platform (Loop):** Built the core product as part of the founding team — a no-code platform for creating in-app growth experiences. Shipped a drag-and-drop UI editor with inline editing, real-time preview, and **GenUI** to generate complete user journeys from a single prompt — enabling clients to ship in-app campaigns without writing a line of code.
 - Platform-Agnostic SDK Suite:** Shipped production-grade SDKs for **React, React Native, Flutter, and Android** enabling client integrations in under **5 minutes**. Designed a centralized middleware architecture that achieved a **95% reduction** in SDK maintenance overhead across 4 platforms.
 - AI-Powered Engagement Engine:** Built the RAG-based recommendation system that **drove 60K+ monthly clicks** with **up to 1% CTR lift** across client apps. Owned the full stack from embedding pipeline to UI rendering — no handoffs.
 - Multi-Tenant Platform Infrastructure:** Designed and operated the multi-tenant backend serving **100K+ DAUs** with **99.9% uptime** using Next.js, TypeScript, Golang, and AWS. Led production incident triage, identified reliability bottlenecks, and shipped the fixes.
 - Client Integrations — Ajio, Wakefit, Third Wave Coffee:** Worked directly with e-commerce clients to understand their growth problems, scoped solutions, and shipped features end-to-end. Managed the full feedback loop from customer requirements to production deployment.

PROJECTS

- Agentic Template — AI Workflow Orchestration Starter (FastAPI, LangGraph, PostgreSQL):** Developed a production-oriented starter framework for building agentic AI systems using LangGraph and FastAPI. Implemented workflow state management, persistence, checkpointing, and REST APIs to support long-running multi-step AI workflows. Designed for rapid development of custom agents, RAG pipelines, and workflow automation systems with extensible graph-based execution patterns.
- Beacon — On-Call Incident & Escalation Platform (Next.js, Hono, PostgreSQL/Drizzle):** Multi-tenant on-call system with signed HMAC webhook ingest, timer-driven escalation policies, and a human-approved LLM flow for AI-generated GitHub issue comments. Ships with cookie auth, Drizzle migrations, seed data for demos, a public status surface, optional Resend notifications, and GitHub Actions CI covering unit and Docker integration tests.
- Shadient — Gradient Design Tool (Next.js 15, TypeScript, Tailwind, Zustand, ShadCN UI):** Browser-based gradient design tool with real-time HTML5 Canvas rendering, text/image overlays, and CSS/SVG/PNG export. Deployed on Vercel.
- pgtruth.com — Crowdsourced PG Review Map (Next.js 14, Supabase, Mapbox GL JS):** Anonymous map-based review platform for paying guest accommodations in Bangalore — geolocation search, user submissions, and interactive map rendering.
- Buffer — macOS Clipboard Manager (Swift, SwiftUI, AppKit):** Contributed majorly to an open-source lightweight clipboard manager for macOS built with SwiftUI and AppKit. Features include on-device OCR via Apple Vision framework, disk-backed storage for large content, pins, bookmarks, multi-select paste, and configurable global hotkeys. **~2 MB install, fully local and private.** Maintained by **samirpatil2000**.
- Claude Pulse — Chrome Extension for Claude Usage Observability (JavaScript, Chrome Extensions API):** Contributed UI improvements to an open-source Chrome extension that surfaces real-time Claude usage metrics — context window consumption, rate limits, and remaining time window — directly inside the Claude interface. Maintained by **samirpatil2000**.

SKILLS SUMMARY

- Frontend:** Next.js, React.js, TypeScript, React Native, Flutter, Tailwind CSS, Zustand, ShadCN UI
- Backend:** Node.js, FastAPI, Express.js, Golang, Python
- Databases:** PostgreSQL, Supabase, MongoDB, Redis, Elasticsearch
- AI / ML:** LangChain, LangGraph, RAG Systems, OpenAI & Anthropic APIs, pgvector
- Cloud & Tools:** AWS (EC2, S3, Lambda), GCP, Docker, Kafka, GitHub Actions

EDUCATION

- Sri Siva Subramaniya College of Engineering

Bachelor of Engineering - Computer Science

Chennai, India
Nov 2020 - June 2024
